Filler Tiles

DECORAIDS
MORE DRAMA

"Filler Tiles" also called "Border Tiles", are created to be easily cut into any size and shape you need, without ruining the overall design of the tile.

These tiles are ideal for placing along the edges or border of a ceiling or wall of the room, because they ensure the design looks smooth and continuous. By using filler tiles in the borders, you won't have to cut into the main tile's design, which helps maintain the original look.

They are also useful if the walls or ceilings are uneven, as the filler tiles can be adjusted to fit perfectly, giving the space a clean and balanced appearance.

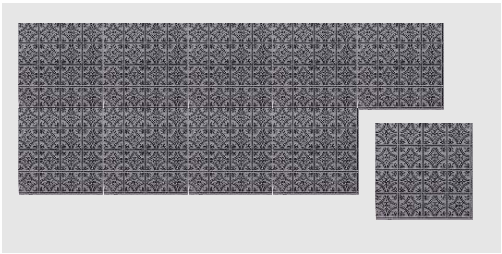
RETROWOOD PLANKS

CEILING

Installation Glue-up Panels

Step 1

Layout the Tiles



Two Edged Tiles :

Layout is necessary to determine the dimension of these perimeter tiles and can be done mathematically or by temporarily placing the tiles on the ceiling with tape. it is necessary to start the installation of two edged tiles from the corner with overlapping edges facing out. so that you can overlap the edges with your next tile.

Four Edged Tiles :

Layout is not necessary because all you need to do is to start from the centre of the room and work your way out.

Step 2

Create a start Line

Two Edged Tiles :

Measure out from each end of the wall a distance equal to the width of the perimeter tile sand using a chalk line, strike a staring line. this is necessary since most walls are not perfectly straight. Align the edges of the perimeter tiles with this line, beginning in one corner of the room.

Four Edged Tiles :

To find the centre of the room you would measure all four Walls, find the centre of all four walls and then connect two opposite facing walls with a chalk line.

Step 3

Cut the tiles using Scissors

Faux metal ceiling tiles look very realistic. However, they can be easily cut by first drawing a aline on the back then using a pair of large scissor. they can also be cut using s multi -tool fitted with a fine-tooth blade.

Step 4

Glue Tiles in Place

Glue Tiles in place using a High-Tack Adhesive (Instant Grab 310)

These decorative ceiling tiles are very lightweight and are put up with a high- tack, water based adhesive that immediately holds the tiles in contact with the ceiling while, at the same time, allowing it to be slid sideways for alignment and positioning. No tape is necessary.

Step 5

Cut Out Tiles for Fixtures & Ducts

Openings for electrical boxes and heating/ cooling ducts can be cut using either scissors or a utility knife. The video demonstrates how to locate the proper position for these

Click or Scan for Installation Video

DECORAIDS

CEILING

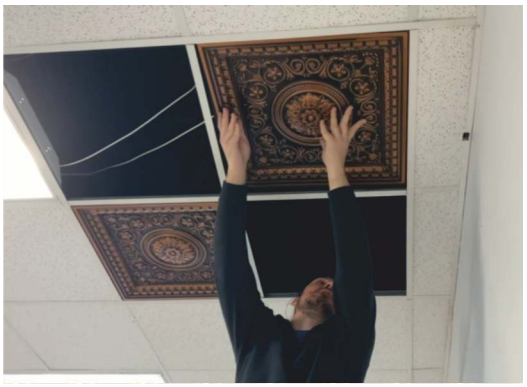
Installation Drop in Panels

Step 1

Installing Full Tiles

You will not need to find centre of the room when you are installing drop in ceiling tiles if you have an existing grid system.

Simply install the first tiles by pushing the ends in too the creases of the existing grid systems. Take care not to push too hard on the tile, but just gently enough to insert it over the existing tile. Repeat the same process described until you have completed all of the whole tiles and are left with the edges.



Step 2

Ways to Finish the Edges

Use a Filler Tiles :

This is so you do not cut the original tile's design. A filler tile will fall nicely into all four sides.

Cut the original tile :

The 'cut-to-fit' faux tin drop in ceiling tiles may need an adhesive to hold them tightly in place. This is because they will not to be held from all four corners into the existing grid system. However, if you are able to cut the tiles to ensure a tight fit between the wall, then you may just dispense the adhesive. if you are planning on installing crown molding that will help keep the cut in place.

Step 3

Ways to color Match your Grid

Paint your grid to match :

if you are going to paint your grid, do so before installing the tiles to avoid getting paint on them. Go to your local paint store and have them scan the tiles find a match.

Use Grid Covers :

Do the same for your A/C vents and light covers etc.

For most of our tiles we offer grid covers to match. We offer peel and stick or snap on grid covers in matching colors.

Make sure to clean your grid with alcohol if you are using peel and stick covers.

WALL

Installation Glue-up Panels

Step 1

Layout the Panel

Layout is not necessary because all you need to do is to start from the centre of the wall and work your way out.

Step 2

Create a start Line

To find the centre of the room you would measure all four Walls, find the centre of all four walls and then connect two opposite facing walls with a chalk line.

Step 3

Cut the Panel using Scissors

Wall panels look very realistic. However, they can be easily cut by first drawing a aline on the back then using a pair of large scissor. they can also be cut using multi -tool fitted with a fine-tooth blade.

Step 3

Glue the panel

Glue Panel in place using a High-Tack Adhesive. These decorative Wall panel are very lightweight and are put up with a high- tack, water based adhesive that immediately holds the tiles in contact with the Wall.

Step 5

Alignment and Positioning

at the same time, allowing it to be slid sideways for alignment and positioning. No tape is necessary
